

### Monthly Sales Trend Analysis :

```
SELECT
    EXTRACT(YEAR FROM Date) AS year,
    EXTRACT(MONTH FROM Date) AS month,
    SUM("Total Amount") AS monthly_revenue,
    COUNT(DISTINCT "Transaction ID") AS order_volume
FROM
    retail_sales_dataset
WHERE
    Date BETWEEN '2023-01-01' AND '2023-12-31'
GROUP BY
    EXTRACT(YEAR FROM Date),
    EXTRACT(MONTH FROM Date)
ORDER BY
    year, month;
```

### Results Table:

| year | month | monthly_revenue | order_volume |
|------|-------|-----------------|--------------|
| 2023 | 1     | 14875           | 82           |
| 2023 | 2     | 29750           | 99           |
| 2023 | 3     | 31100           | 95           |
| 2023 | 4     | 34225           | 108          |
| 2023 | 5     | 37950           | 113          |
| 2023 | 6     | 31925           | 100          |
| 2023 | 7     | 32050           | 96           |

| year | month | monthly_revenue | order_volume |
|------|-------|-----------------|--------------|
| 2023 | 8     | 34275           | 104          |
| 2023 | 9     | 31750           | 96           |
| 2023 | 10    | 37025           | 111          |
| 2023 | 11    | 35725           | 106          |
| 2023 | 12    | 37800           | 110          |

#### Analysis:

1. The dataset contains a full year of sales data from January to December 2023.
2. **Revenue Trends:**
  - Lowest revenue month: January (\$14,875)
  - Highest revenue month: May (\$37,950)
  - Steady growth from January to May
  - Seasonal dip in June-July, then recovery
  - Strong end-of-year performance (November-December)
3. **Order Volume Trends:**
  - Lowest volume month: July (96 orders)
  - Highest volume month: May (113 orders)
  - Generally follows revenue patterns
4. **Key Observations:**
  - May was the peak month for both revenue and order volume
  - Summer months (June-August) saw slightly lower performance
  - Holiday season (November-December) performed well but didn't surpass May
